Professional Development Assessments

## The Suite of READSPEAKER Corporate Learning Solutions

Deploy ReadSpeaker text to speech through the cloud or embedded into applications, devices, or solutions for your business's online and offline listening needs.

Online Reading	Add text to speech to your online learning environment with our streaming technology, and your employees can listen to content with one click of the ReadSpeaker Listen button.
Embedded Text to Speech	Integrate ReadSpeaker text to speech locally into mobile applications, installed software applications, or hardware devices.
Speech Production	If streaming audio isn't the right solution for your corporate learning environment, it's possible to produce the audio. We offer a variety of solutions that allow you to create audio files that can then be integrated into a learning management system or other applications. These files can be used offline, so your training is available whenever, wherever, even if not connected to the Internet.

## See what your company can do with ReadSpeaker text to speech

### Stream Audio

Increase portability by allowing your employees to listen to content with one click of the ReadSpeaker Listen button, as well as take your digital content with them on the go via an MP3 file.

### On-Demand Voice Talent

Cost-effectively and easily add and update the voiceover for a presentation, training manual, or learning course with ReadSpeaker text to speech instead of using costly and time-intensive human actors.

### Dynamic Content

ReadSpeaker solutions are designed to deliver content that is constantly changing, quickly and efficiently.

### Multiple Voices

Integrate multiple ReadSpeaker voices to serve the unique needs of your content and audience.

### Script Testing

Test scripts before they go into production with ReadSpeaker text to speech.

### Multilingual Material

Allow your employees to translate text into their native language or produce audio in multiple languages using ReadSpeaker text to speech.

ReadSpeaker is a global voice specialist providing dozens of languages and lifelike voices. Using industry-leading ReadSpeaker and VoiceText technologies and solutions, the company delivers the most natural sounding synthesized voices on the market. The only provider to control the total delivery chain, ReadSpeaker uses next-generation Deep Neural Network (DNN) technology and feedback to structurally improve voice quality at all levels. ReadSpeaker has offices in 15 countries, and over 10,000 customers in 65 countries, providing a complete text-to-speech (TTS) offering, with both Software-as-a-Service (SaaS) and licensed solutions. A fully integrated TTS provider, with a wide variety of applications for varying channels and devices in multiple industries, giving a voice to businesses and organizations for online, embedded, server or desktop needs, apps, speech production, custom voices and more. With more than 20 years' experience, the ReadSpeaker team of experts is leading the way in text to speech. ReadSpeaker is "Pioneering Voice Technology".
